A Riverbank History of the Midlands: The Congaree, Broad and Saluda Rivers

As is often the case with places, Columbia’s history is tied inextricably to its landscape, and more specifically its rivers. Serving as the highways of the day, South Carolina’s rivers provided ready access to an inland wilderness. Lowcountry Rivers led inland to the fall lines, rapids and shoals of the Congaree, Broad and Saluda. It is a landscape of rivers, flood plain swamps and hardwood bluffs. These rivers tell a history of our state and our capital, Columbia.

Fort Congaree was first built in the early 1700’s near a Native American trading post along Congaree creek. It was a crossroads of the Catawba and Cherokee Nations and the staging point for backcountry development in the state. Above the Congaree was no man’s land, although both tribes traveled the riverbanks to fish and hunt. Eswa Huppiday meaning “Line River” divided the territory with the Catawba claiming the land to the north and the Cherokee hunting the lands to the south. This was the Broad River.

As early settlers began to move inland from the coast seeking fertile farmlands, native populations were displaced and populations declined as a result of smallpox epidemics brought to the continent by European settlers. Eventually the expansion reached the Congaree River Valley. Affluent planters introduced the plantation system and took advantage of the existing native infrastructure, converting trading paths to roads and ferries crossings across the swamp as a means of transporting goods back to Charleston for market.

The village of Granby was established on the Congaree in what is now known as West Columbia in 1753. It was made the county seat of government, home to a courthouse, stores, boat landing and numerous houses. A major ferry crossing along the Congaree River served the area. In 1771, Wade Hampton built a bridge crossing the river connecting Granby to what would become Columbia. The bridge would be washed out and rebuilt several times before ferryboats became the only means of crossing the streams.

By 1786, with the South Carolina General Assembly directive that the seat of government be moved from Charleston to Columbia, the lower lying Granby was all but forgotten. Columbia is set on a plateau 350 feet above mean sea level. It overlooks the Congaree at the confluence of the Broad and Saluda Rivers. These rivers would serve as the most important means of transportation in the state for the next 50 years.

Riverfront History

Early 1700's:
- Fort Congaree, a backcountry fort along Congaree Creek, was built.
- Early 1700's: Saluda River Valley settled by Dutch immigrants.

1700

1771:
- Wade Hampton builds bridge connecting Granby and Columbia. It is washed out by high flows on the Congaree by 1786.

1753:
- Granby Village laid out on west side of Congaree River.

1786:
- South Carolina General Assembly directs that the seat of state government be moved from Charleston to Columbia.

1771:
- Saluda Factory becomes one of first textile factories in the state.

1787: Second bridge across Congaree is built. It too is destroyed in 1796. Ferries serve as only means for crossing river.

1787:
The Carolina makes trip from Charleston to Columbia in 4 1/2 days and loaded nine hundred bales of cotton on tow boats.

1822:
The Carolina makes trip from Charleston to Columbia in 4 1/2 days and loaded nine hundred bales of cotton on tow boats.

1824:
- Columbia Canal excavated just below the falls on the Broad River.

1827:
- Columbia Canal built just below the falls on the Broad River.

1829:
- Broad River Bridge is built and 1500 ft dam built on Broad River near confluence with Saluda to channel water into the Columbia Canal.

1829:
- Columbia Canal Company builds Gervais Street Bridge across Congaree.

1830:
- Saluda Factory becomes one of first textile factories in the state.
1840: State of SC drops subsidy of Columbia Canal.

1842: Railroads come to Columbia; canal traffic decreases significantly. Canal begins to be used for local commerce and to provide hydraulic power for industries.

1847: Work on State Penitentiary began on Congaree.

1865: General W.T. Sherman's army enters city; fires nearly destroy Columbia. Bridges are burned to delay advance of troops.

1867: As Columbia rebuilds, a decision to enlarge the canal as a means of providing power source for Columbia's rapid industrialization occurs.

1867: Work on State Penitentiary began on Congaree.

1888: As Columbia rebuilds, a decision to enlarge the canal as a means of providing power source for Columbia's rapid industrialization occurs.

1890-1905: Six other textile mills built in Columbia, namely by W.B. Smith Whaley + Richland Mill + Granby Mill + Olympia Mill

1928: Gervais Street Bridge construction completed.

1928: Gervais Street Bridge construction completed.

1933: Lake Murray dam construction completed.

1894: Columbia Duck Mill starts motors.

1894: Columbia Duck Mill starts motors.
Riverfront History

As river traffic increased, and Columbia began to grow, it became necessary to build a canal. It would be completed by 1824. The canal was excavated below the falls on the Broad River, just north of the city. It had an eight foot-wide towpath on each side. The state sponsored Columbia Canal was a notable example of engineering expertise in the nineteenth century. Robert Mills, a federal architect, was instrumental in its development. It would play a significant role in Columbia’s commercial and industrial growth.

The Congaree River was navigable for steamboats from Columbia to the Santee River. The waterway of more than 175 miles in length eventually drained into the Atlantic Ocean. Steamboats, tugs and canal boats regularly made the trip from Columbia to Charleston, via the Santee Canal, with more than 30,000 bales of cotton annually, and with full return freights. In 1822, the Carolina made the trip upriver in 4 ½ days.

In 1827, a bridge was constructed across the Congaree at the foot of the burgeoning industrial and commercial Gervais Street. A new era of industry had arrived in the city. The Broad River Bridge was built two years later in 1829 and a 1500 ft dam constructed to channel water into the Columbia Canal along the Broad River near its confluence with the Saluda.

In 1830, the Saluda Factory was built as one of the first textile factories in the state. Ten years later, the State would drop its subsidy of the canal and by 1842 the railroads would arrive. Canal traffic decreased and its subsequent use was transferred to local commerce and as a hydraulic power source for industry. By 1846, railroad services were extending into the Upstate—Greenville, Spartanburg, Anderson area.

In 1865, the 17th of February, General W.T. Sherman would enter the city. It would nearly be destroyed by fire. After the end of the Civil War, Columbia would rebuild. The canal would be enlarged and would run along the Congaree for about three miles, providing electricity for emerging textile mills.

By 1894, as a result of mill growth, mill villages began to emerge along the riverbanks in the Midlands. The planned community of Brookland would house mill workers in what is now West Columbia. Ferry boats were used to transport workers across the river to the mill, but with time the need for a bridge became apparent. The Guinard family built a wooden bridge providing access to the mill and uniting the riverbank communities, as demand for wanting to visit Columbia increased.

Six textile mills were built in Columbia between 1890 and 1905. Cotton production in the state was among the largest in-
provided a public space for Columbia’s growing population. It was situated along the canal with lined trees and landscaping to screen the large concrete walls of the penitentiary. There was also a zoo in the area where camels, deer, and exotic birds could be viewed.

The Gervais Street Bridge construction began in 1926 and was completed in 1928. It is one of four spandrel arched bridges of reinforced concrete in the state. From 1928-1953, the Gervais Street Bridge would be the only means of crossing the Congaree. Designed by Joseph W. Barnwell, it is the earliest and most decorative of the three bridges that now cross the river.

The Saluda River Valley was originally settled by Dutch immigrants in the 1700’s. The Dutch Fork namesake reflects this heritage, as a fork in the valley where migration occurred. The valley was subject to frequent flooding. General Robert E. Lee was one of the first to recognize the potential for a dam. It would provide power for many of the mills in the area.

In 1927, plans for the largest earthen dam in the world had been set in place and by 1933 the landscape would change dramatically. Lake Murray inundated some 78 square miles of land as one of the largest man-made lakes in the world.

The Congaree, Broad, and Saluda rivers provide miles of riverfront for South Carolina’s capitol city and played a significant role in Columbia’s landscape history. The story of our history is tied to the land, and as with many places, a river runs through it.
